My name is NIWENIRINGIYE Christian.

CNPortfolio: UI and UX design document

1. Identity and concept

App name	CNPortfolio
Student	NIWENIRINGIYE Christian
Registration number	25/27889
Verification code	MOB-A2-7889
GitHub	cxnisme / MOB_A2_2527889
Platform	Android (React Native, Expo, TypeScript)

Concept

CNPortfolio is a pocket portfolio that works with no internet. In a recruiter meeting I open it, and within one screen the recruiter can read who I am, see my headline and short biography, and verify my identity with the code MOB-A2-7889. Skills show a level and the tools used, and every project explains the problem, my own contribution and the technology used.

Intended recruiter

Hiring managers and technical recruiters for software, audio-technology and mobile roles or internships, including people meeting me in person where the network may be poor. They have a few minutes, often hold a phone in one hand, and want proof of work rather than long text.

Visual direction

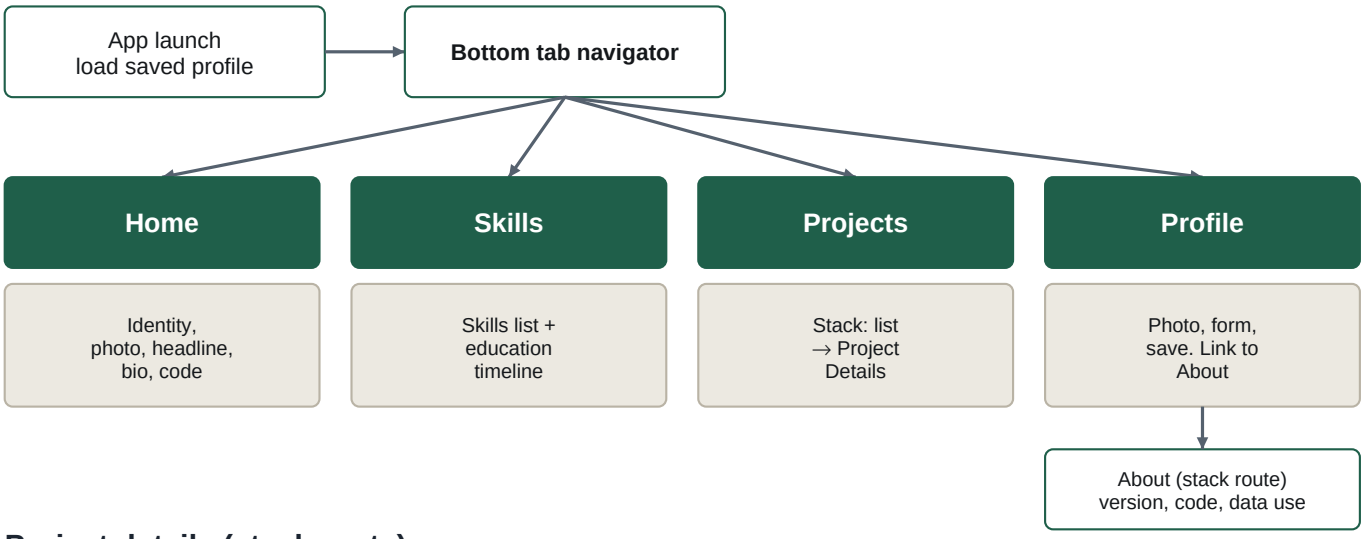
A warm, calm "paper and forest" interface: off-white background, white cards with thin borders, and one deep forest-green accent for actions and the selected tab. A floating tab bar sits at the bottom. Large type, generous spacing and a single accent keep it readable on a narrow phone. The rounded-square avatar with the initials NC is the fallback identity mark.

Colour direction

Background	Surface	Surface alt	Accent	Text	Muted text	Error
#F3F1EC	#FFFFFF	#ECE9E1	#1F5F4A	#14171A	#5B6168	#B02E2E

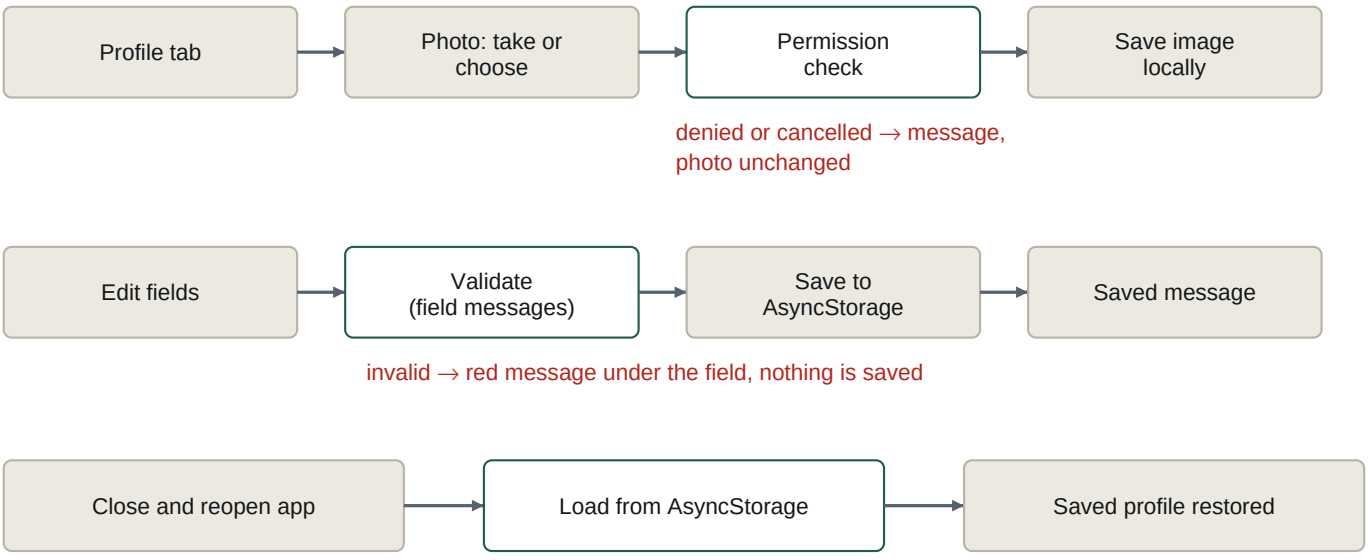
2. User flow and information architecture

Navigation structure



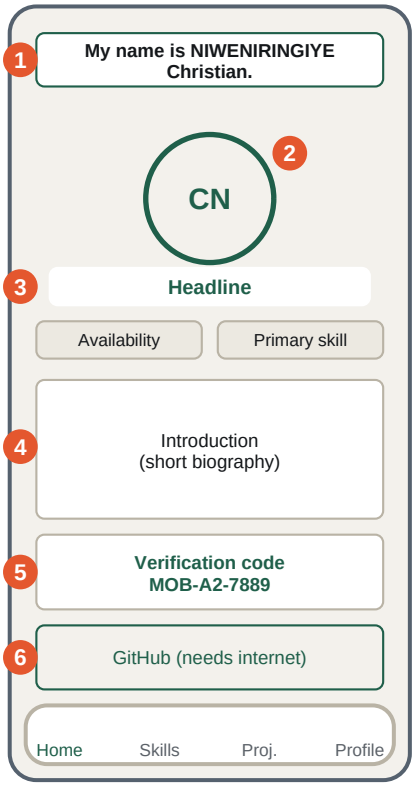
Project details (stack route)

Profile editing, media selection and saved state

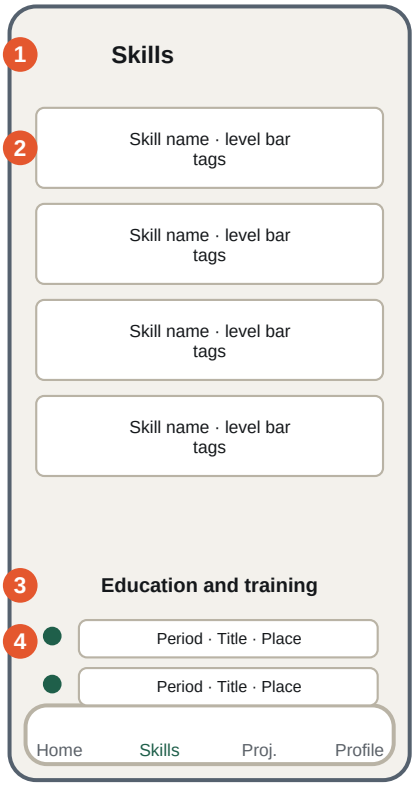


Offline rule: every screen above reads only local data. The one optional link, the GitHub profile, is labelled "(needs internet)" and shows a friendly message if it cannot open.

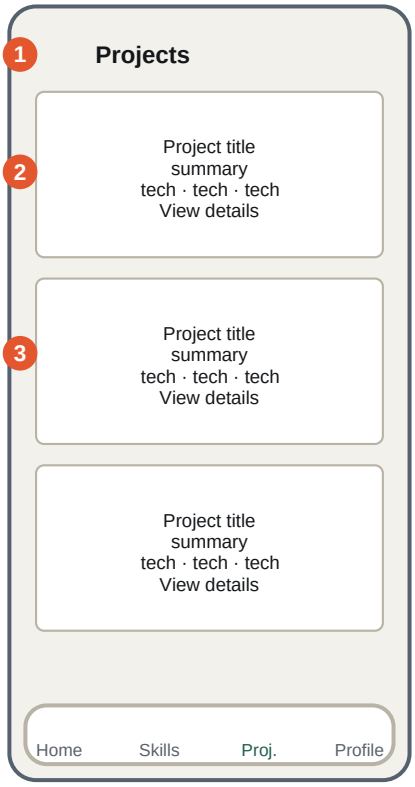
3. Annotated wireframes (1 of 2): Home, Skills, Projects



1. First sentence is exactly "My name is NIWENIRINGIYE Christian." It is the first text on screen.
2. Profile photo, or the NC avatar when none is saved. The camera badge opens Profile.
3. Professional headline (editable).
4. Short introduction, editable in the Profile tab.
5. Verification code MOB-A2-7889.
6. Optional link labelled as needing internet.



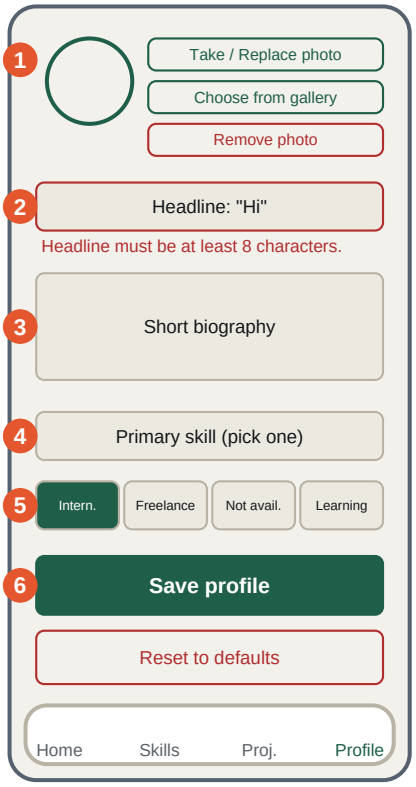
1. Screen title is a header for screen readers. Floating tab bar at the bottom.
2. Five skill cards with level bar and tags.
3. Education timeline built from one reusable EduItem component.
4. Year column and divider show order. Text wraps, so large system text still fits.



1. Title of the stack's first screen.
2. Each card shows title, summary and technology.
3. Whole card is one large touch target (minimum 48 dp) that opens the detail screen.

4. Annotated wireframes (2 of 2): Project Details, Profile Editor, states

1. Back arrow returns to the project list and keeps the session.
2. Project title as header.
3. Problem the project solves.
4. My own contribution.
5. Technology as chips that wrap onto new lines.



1. Photo preview with Replace and Remove actions.
2. Field-level error under the field, in red text and a red border.
3. Biography: 20 to 240 characters, with counter.
4. Primary skill: choose one of five skills.
5. Availability: choose one of four statuses.
6. Save is blocked until every rule passes.

7. Empty state.
8. Permission denied: explains the result and offers the gallery. Opens Settings if blocked.
9. Cancellation: nothing changes.
10. Success confirmation.
11. Error state with retry.

5. Visual and accessibility decisions

Colour and contrast (WCAG 2.1 ratios, calculated)

Pair	Foreground	Background	Ratio	AA (4.5:1)
Text on background	#14171A	#F3F1EC	15.9:1	Pass
Text on surface	#14171A	#FFFFFF	18.0:1	Pass
Muted text on surface	#5B6168	#FFFFFF	6.3:1	Pass
Accent on background	#1F5F4A	#F3F1EC	6.7:1	Pass
White text on accent button	#FFFFFF	#1F5F4A	7.5:1	Pass
Error text on surface	#B02E2E	#FFFFFF	6.4:1	Pass

Typography and spacing

System sans-serif font, so text matches the phone. Sizes: title 34, hero sentence 24, section heading 20, body 16, small and helper text 14 (scalable units). Body text uses a line height of about 1.5. Spacing follows a 4-8-16-24-32 scale; cards use 16 padding and 14 corner radius. The accent colour is used for one purpose at a time: primary action, selected state, or key identity text.

Accessibility decisions

- **Touch targets:** buttons, chips and cards are at least 44 to 48 dp high.
- **Accessible labels:** every button, input, avatar and tab has a label. Buttons add hints (for example, that the GitHub link needs internet). The photo has a description and the fallback avatar is labelled "Default avatar with initials CN".
- **Roles and state:** headings use the header role, status chips use radio roles with selected state, disabled buttons report disabled.
- **Errors are not colour-only:** each error has a written message under the field and a live-region announcement, as well as the red border.
- **Messages for every media outcome:** permission denied, cancelled, success and failure each show different text.
- **Large-text behaviour:** no fixed heights on text containers, rows wrap (flex-wrap), all screens scroll, and the form scrolls with the keyboard open, so increased system text size does not clip content.
- **Narrow phones:** single column layout, content padded 16, no horizontal scrolling.
- **Offline clarity:** the only online feature is labelled "(needs internet)".

Checks still to do on the real phone

Set the Android font size to the largest setting and check Home, Edit and About; turn on TalkBack and move through the Edit form; test in Airplane Mode. Results go into the test log.
